

Results Delivery & Event Notification Service

lipix

Major Benefits of LIPIX Results Delivery & Event Notification Services include:

- Paperless transfer of clinical information from Providers to Clinicians
- Facilitates the ability of hospitals to leverage their lab as a reference lab for outpatient physicians
- Seamless transfer of clinical data to outpatient physician EHR systems

LIPIX Results Delivery & Notification Service enables provider facilities to selectively distribute discrete patient clinical data to designated clinicians based on predefined rules and subscriptions.

Supported data distribution includes:

- Laboratory results
- Radiology reports
- Cardiology reports
- Patient discharge summaries

Results Delivery:

LIPIX Push has the ability to deliver clinical data or event notifications in 3 basic manners:

- To a clinician via the integrated security of the LIPIX Portal
- To a clinician via secure fax directly to their office
- To a clinician's EHR system via direct data integration

Benefits of using LIPIX Push Services:

LIPIX Push not only allows providers to improve patient care at the point of service, but also the following benefits to the distributing facility:

- Decrease in the total cost of distributing data to outpatient providers
- Improvement in the hospital-practitioner loyalty by enhancing services provided to private physician practices and groups.
- More expedient receipt of results by outpatient physicians
- More reliability in the transmission process
- Decrease in costly medical errors and adverse events
