

MPI Services

LIPIX MPI Services allow health systems to aggregate all data for a single patient under one unique patient ID, facilitating improved efficiency, more effective utilization of data, and improved care.

Facility MPI Services – LIPIX can integrate its MPI solution for your facility to use as its own facility-wide passive MPI, resulting in:

- A cleaner, more streamlined patient record database
- Extremely accurate patient linkages
- A robust, LIPIX-developed patient linking policy complete with LIPIX's proven linkage methods
- Training for your employees in data clean-up provided by LIPIX

Active Patient Identification Services – LIPIX will create a bi-directional interface to your registration software and update it via the LIPIX MPI, Benefits include:

- Registrars can update the registration system in real-time with the most accurate patient demographic record information
- Registrars can quickly and accurately identify if a patient has a pre-existing MRN at your facility. Thus creating a more stream-lined, improved continuum of care.

Analytics Reporting Services – LIPIX will provide your organization with business metric reporting including:

- Total number of patients at your facility
- De-identified Demographic information breakdown
- Total number of patient links, un-links, and overlays at your facility
- Detailed information about linkages to help clean up your facility's records

Consulting Services - LIPIX can supply your facility with subject matter experts to help you navigate the universe of master patient indices and with implementation staff to successfully complete your projects

LIPIX MPI Services help eliminate:

- unnecessary resource utilization
- patient dissatisfaction
- billing discrepancies
- legal exposure from erroneous clinical decisions based on inaccurate patient information

Major Benefits of LIPIX MPI Services include

- Having one facility-wide record for each individual patient seen
- Actively identifying and updating 3rd-party registration systems with the most up-to-date patient information
- Viewing and creating business metric reports specific to your facility
